

Test Plan – Kroolo (Web + Mobile + API)

Objectives

Validate Kroolo's AI-powered project management platform across Web, Mobile, and API layers ensuring functional accuracy, security, performance, and integration reliability.

Intended Audience

Product Owners, Business Stakeholders, Developers, QA, DevOps, and Support Teams.

Features to be Tested

Projects, Tasks, AI Chat, Automations, Integrations, Dashboards, Docs, Workload, Search, User Management across Web, Mobile, and APIs.

Features Not to be Tested

Third-party tool internal logic, external outages, hardware failures.

Risks & Dependencies

AI response accuracy, integration availability (Jira/Slack/Asana), environment stability.

Test Strategy (By Arpit Choubey)

Risk-based testing covering UI, API, integration, regression, and UAT with executed scenarios.

Tested By

Arpit Choubey

Resources Required

4 QA resources

Defect Triage

Daily triage during execution and stabilization.

Entry & Exit Criteria

Entry: Approved requirements & stable build. Exit: No open critical or high defects.

Environment Availability & Health

QA & UAT environments with sandbox integrations and stable API endpoints.

KT from BA

Business workflows, AI behavior, integrations, and data flows.

Project Schedule

Planning → Design → Execution → Retesting → UAT → Sign-off
